FINTECH IN ISLAMIC FINANCE

Featuring high-level analysis of Islamic law, this book examines fintech in Islamic finance from both theoretical and empirical perspectives. Whilst building on existing approaches, it also discusses the current application of fintech in promoting financial inclusion through innovative solutions in Muslim-majority countries, identifying future directions for policy-makers.

With original chapters written by prominent academics, senior lawyers and practitioners in the global Islamic finance industry, this book serves as the first standalone pioneering reference work on fintech in Islamic finance. It also, for the first time, examines the position of Islamic law on cryptocurrencies, such as bitcoin. Besides the conceptual analysis of the Sharīʿah and legal aspects of fintech in Islamic finance, this book provides relevant case studies showing current and potential developments in the application of fintech in various sectors ranging from crowdfunding and smart contracts, to Online Dispute Resolution, Investment Account Platform and identity verification in the KYC process.

Setting the agenda for researchers in the field, Fintech in Islamic Finance will be useful to students and scholars of Islamic finance and financial technology.

Umar A. Oseni is an Executive Director of the International Islamic Liquidity Management Corporation. He was an Associate Professor of Law and Regulation of Islamic Finance at the International Islamic University Malaysia.

S. Nazim Ali is Director of the Research Division of the College of Islamic Studies, at Hamad Bin Khalifa University. He was the Director of the Islamic Finance Project at Harvard University from 1995 to 2014.

PART I
INTRODUCTION 1

1 Fintech in Islamic finance 3
   Umar A. Oseni and S. Nazim Ali

PART II
FINTECH AND FINANCIAL INTERMEDIATION 17

2 Fintech: The opportunity for Islamic finance 19
   Harris Irfan and Daniel Ahmed

3 Implications of technological advance for financial
   intermediation in Islamic finance 33
   Rodney Wilson

4 Fintech in Islamic finance: From collaborative finance to
   community-based finance 47
   Celia de Anca
5 Financial intermediation, fintech and Shari‘ah compliance 64
   Shariq Nisar and Umar Farooq

6 E-commerce and Islamic financial intermediation 75
   Hafis Bello

PART III
SETTING THE SHARI‘AH PARAMETERS 91

7 Fintech in the light of maqāsid al-Shari‘ah 93
   Mustafa Omar Mohammed and Mohamed Cherif El Amri

8 Fintech and Islamic finance: Setting the Shari‘ah parameters 113
   Mohamad Akram Laldin and Hafas Furqani

9 Currency in Islamic Law: A Shari‘ah analysis of bitcoin 120
   Mufti Faraz Adam and Mufti Abdul Kadir Barkatulla

10 Crowdfunding in Islamic Finance: Ensuring proper Shari‘ah oversight 132
   Muhammad Al-Amine Muhammad Al-Bashir

PART IV
LEGAL AND REGULATORY ISSUES 157

11 The regulation of fintech and cryptocurrencies 159
   Nafis Alam and Abdolhossein Zameni

12 Fintech in Islamic finance: Business models and the need for legal solutions 174
   Michael Gassner and Jonathan Lawrence

13 Blockchain technologies and the prospects of smart contracts in Islamic finance 183
   Volker Nienhaus

14 The potentials of smart contract in Islamic trade finance 215
   Leisan Safina and Umar A. Oseni
PART V

CASE STUDIES: FROM CONCEPT TO APPLICATION 233

15 The emergence of Islamic crowdfunding platforms: A case study of Ethis Ventures 235
   Ahmad A. Sabree and Umar Munshi

16 The Investment Account Platform: A practical application of fintech in Malaysia 249
   Noor Suhaida binti Kasri and Marjan Muhammad

17 Integrating waqf crowdfunding into the blockchain: A modern approach for creating a waqf market 266
   Magda Ismail Abdel Mohsin and Aishath Muneeza

18 Blockdentity: A future beyond digital identity 281
   Ishaq Mustapha Akinlaso, Ibrahim Opeyemi Adediran, Abdoulaye Kindy Diallo and Ziyaad Mahomed

19 Banking on ICT: The relevance of online dispute resolution in the Islamic banking industry in Malaysia 303
   Umar A. Oseni and Sodiq O. Omoola

PART VI

FUTURE DIRECTIONS 325

20 Current trends and future impacts of fintech in Islamic finance 327
   Sirajulhaq Yasini and Marifatulhaq Yasini

Index 337

16.5 Volume of fundraising via IAP (as at December 2017) 261
The whole idea of coming up with a book that brings together different concepts and case studies on fintech in Islamic finance started after the successful staging of the 11th LSE-HBKU Workshop on “Fintech and Islamic Finance: Applying *Hiyal & Makharij* and other Islamic Principles”. The workshop was held on 23 February 2017 at the London School of Economics (LSE). Leading finance, legal and Shari’ah experts attended the workshop at LSE which was moderated by Professor Frank Vogel. We would like to thank the moderator, participants and the host, LSE.

After the workshop, which was very engaging and rich in discussion, we decided to invite some key contributors from across the world who are accomplished professionals to contribute to a book believed to be the first of its kind. Some of the chapters in this book were developed later based on preliminary written comments submitted for the workshop. From that moment onwards, we widened the potential contributors’ base to include other leading authors.

This painstaking effort in identifying leading authors for this pioneering project is unprecedented; and we would like to thank all contributors for their support and cooperation throughout the editing process. Despite the numerous iterations with the authors and scores of correspondences to ensure all chapters were turned in within a reasonable time, we found the authors to be very cooperative and responsive. We are convinced that this would not have been possible without the constant reminders from the publisher to meet the timeline for the book. Specifically, we appreciate the efforts of one of the contributors, Dr. Sodiq Omoola, and a research scholar, Abdurahman Jemal Yesuf, both of whom helped at different stages in ensuring all chapters comply with the standard referencing style in a consistent manner.

It is worth noting that Chapter 19 is reprinted by permission of Taylor & Francis. The original publication appeared as: “Banking on ICT: The relevance

We would like to thank the Publisher, Taylor & Francis, and its editors, particularly the fantastic Acquisition Editor, James “Joe” Whiting who understood the urgent need for the book from the very moment we introduced the topic to him. We wish to formally acknowledge Taylor and Francis Group, Ethis Ventures, and IAP Integrated Sdn Bhd, whose materials were used in some of the chapters of the book.

We hope these humble efforts will help to spur further research in this unique field and trigger further innovative fintech products, services and solutions in the global Islamic financial services industry.

CONTRIBUTORS

**Abdolhossein Zameni** is a Lecturer at Henley Business School, University of Reading Malaysia. He obtained a BSc in Industrial Engineering at Mazandaran University of Science and Technology in Iran. In 2006, in order to pursue his education in an international environment, he moved to Malaysia and obtained his MBA in Finance at Multimedia University. In 2014, he was awarded a PhD in Finance by the National University of Malaysia (UKM). Dr. Zameni has experience in the delivery of educational programmes at undergraduate level, as well as business experience within the fields of finance, accounting and industry. His area of research revolves around IPO and fintech regulatory issues.

**Abdoulaye Kindy Diallo** is currently exploring application of blockchain technology in the financial services industry. He holds a dual master’s degree in Science and Islamic Finance and a Bachelor’s degree in Computer Science. With nearly a decade experience in the IT industry, he works to bridge the gap between IT and Islamic Finance.

**Ahmad A. Sabree** is the former Head of Business and Shari’ah Development and crowdfunding specialist for Ethis Ventures, and is from Atlanta, Georgia. He holds a BSc in *Usul al-Fiqh* (Shari’ah) and an MSc in Islamic Banking and Finance, both from International Islamic University Malaysia (IIUM). His thesis was on the topic of “Adapting Crowdfunding for SME Finance in Malaysia”. His research led him to become a specialist and consultant in crowdfunding. Ahmad provided Shari’ah and crowdfunding consultation to lawyers structuring the first Islamic P2P crowdfunding contracts in Malaysia and was instrumental in coordinating Shari’ah discussions and decisions with leading international Shari’ah advisories to acquire the associated Pronouncements of Shariah compliance.
Aishath Muneeza is an Associate Professor at the International Centre for Education in Islamic Finance (INCEIF), Kuala Lumpur, Malaysia. She is the first female Deputy Minister of Ministry of Islamic Affairs and is the former Deputy Minister of Ministry of Finance & Treasury of the Republic of Maldives. She is also the chairwoman of Maldives Centre for Islamic Finance. She is considered to be the founder of Islamic finance in the Maldives. Her contribution to Islamic finance includes structuring of the corporate sukuk and sovereign private sukuks of the country, including the Islamic treasury instruments. She also drafted the Islamic Capital Market framework of the country and has been the only registered Shari’ah adviser for the Islamic capital market in the country since 2013. She played a key role in setting up the Tabung Haji of the Maldives, the Maldives Hajj Corporation, and was its first chairperson. She sits on various Shari’ah advisory bodies nationally and internationally and is chairman for many of these Shari’ah advisory bodies, including the apex Shari’ah Advisory Council for capital market in the Maldives. She has assisted more than 11 institutions to offer Islamic financial products/services.

Celia de Anca is currently the Director of the Saudi-Spanish Centre for Islamic Economics and Finance at IE Business School, Spain. She was previously the Director of Corporate Programmes at the Euro–Arab Management School (EAMS), Granada, Spain. She has also worked for the Fundación Cooperación Internacional y Promoción Ibero-América Europa (CIPIE) and at the International Division of Banco de Santander. She has a master’s degree from the Fletcher School of Law and Diplomacy (Boston, MA), and from the Universidad Politécnica de Madrid. She holds a degree and PhD from the Universidad Autónoma de Madrid, with a comparative thesis on Islamic, ethical/ecological investment funds and on the London Market. She is the Author of Beyond Tribalism, 2012, and co-author of Managing Diversity in the Global Organization, 2007. She has had articles published in specialised journals, in addition to regular articles in the press. She was an external advisor of the Merrill Lynch’s Diversity & Inclusion Council up to 2009. Ms. de Anca is fluent in Spanish, English, French and Arabic.

Daniel Ahmed is a Senior Analyst at the Prime Minister’s Office of the United Arab Emirates, and was previously part of the fintech practice at Deloitte. Daniel is a co-founder of the Islamic Finance & Ethics Society at the University of London, and is currently working with Finocracy to explore and develop solutions that will disrupt the Islamic finance industry. He holds a degree in Political Economy at King’s College London.

Hafas Furqani is currently a lecturer at the Faculty of Islamic Economics and Business, State Islamic University of Ar-Raniry, Banda Aceh, Indonesia. He received his PhD in Economics (2012) as well as Master of Economics (2006), from the Department of Economics, International Islamic University Malaysia. His Bachelor’s degree is in Shari’ah Mu’amalah from the State Islamic University (UIN).
Syarif Hidayatullah, Jakarta (2002). Hafas has extensively written and presented papers in the areas of Shari’ah, Islamic economics, banking and finance in academic journals and conferences. His paper entitled “Theory appraisal in Islamic economic methodology: purposes and criteria”, published in Humanomics (2012), was chosen as a Highly Commended Award Winner at the Literati Network Awards for Excellence 2013. His PhD thesis “The Foundations of Islamic Economics: A Philosophical Exploration of the Discipline” was awarded Gold Medal at the 2012 International Islamic University Malaysia Research, Invention and Innovation Exhibition (IRIIE 2012).

Hafis Bello is a Fintech Analyst, corporate strategist and experienced researcher. He has distinguished himself as a forward-looking executive with great potential in identifying opportunities, increasing productivity and excellent teamwork abilities. Hafis worked at Centre for Islamic Finance at HBKU, Qatar. Prior to this, he was a Business Development Executive at SystemSpecs where he was responsible for business strategy and product support for the FinTech solution, REMITA, for microfinance banks and pension funds. He is a Council Member at Gerson Lehrman Group (GLG), USA. Hafis founded Leeds Interlinks Limited in 2013 and co-founded Carry-On Inc. in 2017. He is an Associate Fellow of the Institute of Islamic Banking & Insurance (IIBI), London. He coordinates training and motivation programmes aimed at unlocking potential and has written articles on self-development initiatives. Some of his academic research in sustainable development, finance and social sciences are published in reputable journals. He has completed his coursework towards a PhD degree in Islamic Banking and Finance.

Harris Irfan is Chairman of the UK Islamic FinTech Panel and a Partner at Gateway LLP, the professional services firm. He is also the Managing Director of Cordoba Capital, the Islamic finance and fintech consulting firm. Harris co-founded Deutsche Bank’s world leading Islamic finance team and was CEO of its Islamic finance subsidiary. He was subsequently appointed global head of Islamic finance at Barclays, and then Head of Investment Banking at EIIB/Rasmala. He is the author of Heaven’s Bankers: Inside the Hidden World of Islamic Finance and holds a degree in Physics from the University of Oxford, UK.

Ibrahim Opeyemi Adediran is a Chartered Accountant and Advance Certified Islamic Finance Executive. He has more than a decade of experience in auditing, commercial and educational sectors. He is a consultant for companies and private individuals and a trainer on IFRS, accounting, internal control and regulatory compliance.

Ishaq Mustapha Akinlaso is a CIAWM doctoral scholar specialising in Innovative Financial Instruments for Infrastructure Development at the Global University for Islamic Finance (INCEIF), Malaysia. Mustapha is the project lead at Blockdentity, a next generation fintech player that is focused on revolutionising legacy identity systems using blockchain and integrated technologies.
Jonathan Lawrence is a Finance partner in the London office of the global law firm K&L Gates, where he has held this position since 2005. He plays a leadership role in the firm’s Islamic Finance practice, Legal 500 UK Islamic Finance. K&L Gates LLP is singled out for its “seamless global service”. Its cross-office team includes London-based Jonathan Lawrence, who has “stunning in-depth knowledge of structuring shari’ah-compliant transactions”. One client describes him as a “real breath of fresh air”, saying: “What has impressed me the most is his ability to act very quickly when required, with a real sense of urgency and commercial awareness often lacking in other firms.” Lawrence writes regularly on fintech issues for www.fintechlawblog.com. He is a member of the Editorial Board of the Journal of International Banking & Financial Law and sits on the Consultation Board of Practical Law Finance.

Leisan Safina is a Treasury Officer in Hayat Kimya, Russia. She was formerly an intern at the International Islamic Corporation for Development of the Private Sector (ICD), Islamic Development Bank Group, Kuala Lumpur office. She received her degree from Kazan Federal University (Russia) and later successfully completed her master’s degree in Islamic Banking and Finance from International Islamic University Malaysia. Her area of interests is Islamic banking and finance, and fintech, particularly blockchain applications, in Islamic finance. She has presented papers in conferences across the world including: “Utilizing Blockchain Technology for Post-Trade Securities Settlement: A Framework for Islamic Capital Markets in the GCC Region” in Gulf Research Meeting 2018 at the University of Cambridge; and “Utilizing Blockchain Technology for Post-Securities Settlement: A framework for Islamic Capital Market in Iran” in the 10th International Forum on Islamic Capital Markets, Tehran, Islamic Republic of Iran.

Magda Ismail Abdel Mohsin is an Associate Professor at the International Centre for Education in Islamic Finance (INCEIF), the Global University of Islamic Finance, Malaysia, teaching Islamic economics and finance. She is the author of the two books on waqf published by Pearson, and an editor of a recent book published by Palgrave. She is also the recipient of four awards: Outstanding Women Achiever for the contribution and achievement in the field of Islamic Economics and Finance, given under the seal of Venus International Foundation, India, March 2016; Recognition for Best Research Efforts Award, awarded by International Council of Islamic Finance Educators (ICIFE) in August 2015; Best/outstanding paper award for the paper, “Financing through cash-waqf: A new innovation for the 21st Century” by the Emerald Group, 2013; Best Book written on waqf in 2014 (Corporate Waqf from Principle to Practice) selected by Sheikh Rashid bin Dail Research Chair for Endowments Studies, Imam Muhammad ibn Saud Islamic University Riyadh, Saudi Arabia.

Marifatulhaq Yasin is Shari’ah Executive at CIMB Islamic Bank Berhad. He received his Bachelor Degree in Law and Shari’ah from International Islamic University Malaysia.
Marjan Muhammad is currently the Head of Research Quality Assurance Office at the International Shari’ah Research Academy for Islamic Finance (ISRA), Kuala Lumpur, Malaysia. She was previously the Director of Research at ISRA. Prior to joining the organisation, she was a tutor at the Faculty of Law and Syari’ah, Islamic Science University of Malaysia (USIM). Dr. Marjan is currently a member of the Shari’ah Advisory Committee at Malaysia Building Society Berhad (MBSB), Malaysia. She also sits as a member of the Shari’ah Committee at Maybank Islamic Berhad, Malaysia and SME Bank, Malaysia. She obtained her Doctoral and Master’s degrees in Islamic Revealed Knowledge and Heritage (Fiqh and Usul al-Fiqh) from the International Islamic University Malaysia (IIUM), after graduating from the same university in 1998 with her Bachelor’s degree. Her research interests in Islamic finance focus on the Islamic capital market. She is the editor of textbooks on the Islamic Capital Markets: Principles and Practices (2015), Islamic Financial System: Principles and Operations (2nd ed, 2016), and Sukuk: Principles and Practices (2017).

Michael Gassner is Editor of IslamicFinance.de and Head of Islamic finance of a Swiss private bank and has been based in Switzerland since 2008. Michael is a member of the Sharia Board of Bosna Bank International in Sarajevo, and a member of the advisory board of the World Congress of Muslim Philanthropists in Chicago. He also teaches Islamic law, finance and economics at Geneva Business School and University of Lausanne.

Mohamad Akram Laldin is currently the Executive Director of International Shari’ah Research Academy for Islamic Finance (ISRA) and Professor at International Centre for Education in Islamic Finance (INCEIF), Malaysia. Prior to joining ISRA he was an Assistant Professor at the Kulliyah of Islamic Revealed Knowledge and Human Sciences, International Islamic University, Malaysia (IIUM). In the period 2002–2004, he was a Visiting Assistant Professor at the University of Sharjah, Sharjah, United Arab Emirates. At present, he is the Member of Bank Negara Malaysia Shari’ah Advisory Council, Chairman of Shari’ah Board of Employees Provident Fund Malaysia (EPF), Member of Shariah Supervisory Council of Labuan Financial Services Authority (FSA), Member of Shariah Advisory Board ZI Shariah Advisory, Member of Shariah Advisor of Dar AlTakaful, Dubai, Member of Shariah Advisory Board, Eco Islamic Bank, Republic of Kyrgistan, Member of Shariah Advisory Council International Islamic Financial Market (IIFM),Bahrain, Member of Shariah Advisor of National Takaful Company PSC, Watania, Abu Dhabi, Member Financial Regulation Advisory Council of Experts (FRACE), Central Bank of Nigeria, Member of The Panel of Recognized International Market Experts in Finance (“P.R.I.M.E. Finance”) and other Boards locally and internationally. He is the recipient of the Zaki Badawi Award for Excellence in Shariah Advisory and Research. Recipient of the Most Outstanding Individual Contribution to Islamic Finance during KLIFF 2016 organised by CERT. Winner of the 2017/1439H Malaysian Islamic Personality Award conferred
by The Government of Malaysia on the occasion of the birthday of the Prophet Muhammad (peace be upon him).

Mohamed Cherif El Amri is an Assistant Professor at the Faculty of Business and Management Sciences and specialises in Islamic Economics and Finance, at Istanbul Sabahattin Zaim University, Turkey. He completed his Bachelor’s degree in Islamic Studies from Ibn Tofail University in Morocco. He had his Master’s in Islamic Jurisprudence and its principles, while his PhD was in Islamic banking and finance from International Islamic University Malaysia. He worked as an intern at several Islamic financial institutions, such as the Islamic Capital Market Business Group, Securities Commission, Kuala Lumpur, Malaysia and Maybank Islamic. He worked as a researcher at the IIUM Institute of Islamic Banking and Finance, Malaysia. He was an Associated Consultant at Amanie Advisors, Kuala Lumpur, Malaysia. He is a member of the Scientific Committee of the International Review of Entrepreneurial Finance Journal and Journal of Islamic Economics and Finance. He has multiple research publications and presentations in the field of Islamic Finance and Economics.

Mufti Abdul Kadir Barkatulla is a prominent Sharia law expert based in the UK with a background in social, Muslim community work, economics and finance. He was trained extensively in Islamic and modern education systems in India and the UK. Mufti has contributed to the British Muslim community as an Imam, Lecturer, Shariah Judge, Developer of Islamic Law information databases, Anchor of Community Television, Media Commentator, Shariah Advisor of Islamic Banks and Funds in Europe and Asia.

Mufti Faraz Adam is the Director of Amanah Finance Consultancy Ltd, a platform for specialist global Shariah advisory services based in the UK. He has spent almost a decade studying Islamic law. He completed his Islamic studies in the six-year Alimiyyah degree at Darul Uloom Leicester. He then went on to specialise in Islamic law and graduated as a Mufti in South Africa at Darul Iftaa Mahmudiyah, Durban, super-specialising in Islamic finance during his studies. Mufti Faraz went on to complete a Master’s Degree in Islamic Finance, Banking and Management at Newman University in 2017. During the past few years, he has attained various industry qualifications. Mufti Faraz is a Shariah advisor at a number of Islamic financial institutions in the UK, Bahrain, Dubai, Singapore and Malaysia.

Muhammad Al-Amine Muhammad Al-Bashir is Shari’ah Advisor at Islamic Corporation for the Development of the Private Sector, Islamic Development Bank, Jeddah, Saudi Arabia. He was the Group Head of Shari’ah Compliance of Bank Alkhair. Prior to joining IDB he was at Bank Alkhair and the International Islamic Financial Market (IIFM). He was also a part-time Lecturer at the Faculty of Laws International Islamic University Malaysia; Ibn Sina Institute of Technology (Malaysia); the Matriculation Centre International Islamic University (Malaysia), the Bahrain Institute of Banking and Finance; the Kingdom University (Bahrain);

**Mustafa Omar Mohammed** is presently the Head and an Associate Professor at the Department of Economics, International Islamic University Malaysia (IIUM) where he has been teaching for more than 15 years. He has published more than 50 refereed journal articles and presented more than 70 papers, mostly at international conferences. He is actively involved in funded and commissioned research projects. His present research areas of interest are in Waqf, Zakat, Islamic Microfinance and *Maqasid al-Shari‘ah*. He has supervised more than 45 dissertations at PhD and Master’s levels. He is also a journal editorial member and on the review panel of 11 academic entities. He has received several quality awards for teaching and research. He was part of a committee responsible for setting up the Institute of Islamic Banking and Finance and recently, the Department of Islamic Finance at IIUM. He also has long experience in translation, Arabic and English. He has undertaken projects for several organisations, including MIFC, IBFIM, AIBIM, IFSB – affiliates of the Central Bank of Malaysia. He offers consultancy and has conducted several trainings on Islamic economics, banking and finance in several countries including Kazakhstan, Singapore, Sri Lanka, Bangladesh, Philippines, Indonesia, South Africa and Uganda. Dr. Mustafa holds a Bachelor and Master degrees in Economics from IIUM and PhD in Finance from Universiti Sains Malaysia.

**Nafis Alam** an Associate Professor of Finance at Henley Business School, University of Reading Malaysia. His research is focussed on fintech, banking regulation, financial market, corporate finance and Islamic banking and finance. His articles have been published in leading journals like *The World Economy, Emerging Markets Review, Pacific Basin Finance Journal, Journal of Asset Management, Journal of Banking Regulation* and *Journal of Financial Services Marketing*, among others. He has also co-authored five books on Islamic Finance, among them *Encyclopaedia of Islamic Finance*, which is the first of its kind and has sold over 1000 copies worldwide. He has recently published three co-edited books in the series Palgrave CIBFR Studies in Islamic Finance, published by Palgrave Macmillan. He was featured as a Professor of the Month by the *Financial Times* in 2014 and received the award for the Upcoming Personality in Islamic Finance for 2016 given by GIFA and hosted by the Indonesian government. He is one of the top influencers in fintech domain and has been recently ranked number one in the Fintech Finance Silver list.

**Noor Suhaida binti Kasri** is currently a senior researcher at International Shari‘ah Research Academy for Islamic Finance (ISRA), Malaysia. She is also the Head of
ISRA’s Islamic Capital Market Unit. Prior to joining ISRA, Dr. Noor Suhaida binti Kasri had almost 12 years’ experience as a Malaysian advocate and solicitor as well as a Syarie lawyer. During her legal practice, she was appointed as one of the members of the Malaysia’s Investigating Tribunal Panel, Advocates & Solicitors Disciplinary Board and headed the Shariah Legal Clinic of Kuala Lumpur Bar Legal Aid Centre. Dr Noor received her Doctor of Philosophy in Islamic Banking Finance and Management from the University of Gloucestershire (in collaboration with Markfield Institute of Higher Education), United Kingdom under the sponsorship of ISRA. Her Master’s in Law was from King’s College of London under the funding of the British Chevening Scholarship Award. Her Bachelor of Law and Diploma in Shariah Legal Practice were from the International Islamic University of Malaysia. She has written a number of research papers, textbook chapters and articles and has presented at conferences globally.

**Rodney Wilson** is an Emeritus Professor who joined INCEIF, Malaysia as Professor of Banking & Finance in March 2013. He founded the Islamic finance programme in Durham University, UK and continues to serve as a member of the Durham Centre for Islamic Economics and Finance. He is also a Visiting Professor at Qatar Faculty of Islamic Studies. Emeritus Prof. Rodney Wilson obtained his BSc and PhD from Queens University Belfast. He was formerly at the Universities of Kuwait, Paris X and the International University of Japan. He served on the OECD Taskforce on Corporate Governance for Stock Exchanges in MENA Region (2011–2012). Previously he served on the Islamic Financial Services Board Working Group on Shariah Governance (2007–2009), was a Consultant on Liquidity and Financial Stability at Qatar Central Bank (2010) and Consultant on Islamic Finance in North Africa to African Development Bank. His research interests include Islamic economics and finance, Middle Eastern political economy and the political economy of oil and gas.

**Shariq Nisar** is a Professor with Rizvi Institute of Management Studies and Research, Mumbai, India. He received his PhD in Economics from Aligarh Muslim University, India. In the past, he worked at Harvard Law School as a Senior Visiting Fellow. Before moving into academia, Shariq spent over a decade and a half in the Indian finance industry developing financial products and services aimed at improving financial inclusion. He made seminal contributions to India’s financial sector by launching India’s first Shariah index at Bombay Stock Exchange, the first mutual fund scheme and first venture capital scheme. He played a key role in the design and launch of Shariah Index at Chittagong Stock Exchange, Bangladesh. He made a presentation before the Select Committee of the Indian Parliament during the discussion on Insurance Amendment Bill 2015. Shariq established India’s first Centre for Alternative Finance at ITM Business School, Mumbai. He has authored 3 books and 60 research papers and articles. Shariq received the Skoch Digital Inclusion Award for the inclusion of minorities in India’s financial system and an Honorary Award from Islamic Finance Forum of South Asia, Colombo for his
contribution to the Indian finance industry. Shariq is on the board of various companies and a member of the Academic Steering Committee of ICMIF, UK.

Sirajulhaq Yasini is Executive Director and Head of Islamic Finance, Mitsubishi UFJ Financial Group (MUFG), DIFC, Dubai, United Arab Emirates. He is an Islamic banker with over 13 years of experience in Islamic banking and finance. He worked on many Sukuk programmes and issuances using different Islamic innovative structures, numerous syndications, project finance, Islamic hedging products and Islamic structured notes programmes. He served corporate, sovereign and Islamic financial institution clients in the Middle East, Europe, Americas, Asia Pacific and Central Asia. Siraj is trained as a Shariah expert from Al Azhar University, Egypt and in finance and legal studies from Boston University, MA.

Sodiq O. Omoola is an Assistant Professor of Law at the International Islamic University Malaysia (IIUM) with a special interest in e-commerce and Islamic finance dispute resolution. He obtained his LL.B (Hons) from Bayero University Kano in 2010 and qualified as a Barrister and Solicitor of the Federal Republic of Nigeria in 2012. He also bagged a Master of Comparative Law with a focus on online dispute resolution and Islamic finance from the International Islamic University Malaysia. He has published articles in refereed journals and presented research papers in conferences in Malaysia and Nigeria. Sodiq is a member of the Nigerian Bar Association, the International Ombudsman Association, United States and the Alternative Dispute Resolution Research Clusters in IIUM.

S. Nazim Ali is Research Professor and the Director for the Center for Islamic Economics and Finance, College of Islamic Studies, at the Hamad Bin Khalifa University, Qatar Foundation. Dr. Ali has spent the last 30 years spearheading research in Islamic finance and faith-based initiatives in finance. He was Founding Director of the Islamic Finance Project (IFP) at Harvard Law School, Harvard University from 1995. He has paid special attention to lines of inquiry that seek to examine and interrogate the frontiers, facilitate research and encourage dialogue among various stakeholders and external discussants. He has played a lead role in organising several conferences and seminars creating forums for highly intellectual debates on global trends. In addition, his project IFP has played a role in advising more than 30 theses accepted in Islamic finance and law at various schools at Harvard. Some of Dr. Ali’s most significant contributions to the field have been in the Islamic Finance Databank: an online information source in the field; LSE (London School of Economics) Workshop: an annual event to discuss the current pressing issues facing the field; and the Harvard University Forum on Islamic Finance, the proceedings of which are published under his editorship. Islamic Finance and Development (2014) is the most recent title in this series. In addition, he has published several papers and monographs; the most recent ones are Takaful and Islamic Cooperative Finance: Challenges and Opportunities (2016) and Shari’a-Complaint Microfinance (2012). Dr. Ali has been actively involved with the US Treasury, The Federal Reserve Bank of
New York and central banks in other countries, working to improve understanding of and to address misconceptions about the Islamic Finance Industry. Dr. Ali received his PhD from the University of Strathclyde, Glasgow, United Kingdom. He also continues his affiliation with Harvard as a Visiting Fellow at the Prince Alwaleed bin Talal Islamic Studies Program at Harvard University, Cambridge, MA.

Umar A. Oseni is the Acting Chief Executive Officer and Executive Director (Legal & Compliance) of the International Islamic Liquidity Management Corporation (IILM), a supranational financial institution headquartered in Kuala Lumpur. Prior to this, he was an Associate Professor of Law and Regulation of Islamic Finance at the International Islamic University Malaysia. Umar was also a visiting fellow at the Islamic Legal Studies Program of the Harvard Law School, Harvard University from 2011 to 2012. Apart from being a Harvard-certified negotiator and dispute resolution expert, Umar has consulted for numerous bodies in the areas of law and regulation of Islamic finance, Islamic finance research and publication, and alternative dispute resolution in Islamic law. He has also published numerous articles in refereed journals and books in conflict management and avoidance; alternative dispute resolution; arbitration; comparative law; Islamic finance; and international commercial arbitration. He is a member of the following professional organizations: Mediators Beyond Borders; Young International Arbitration Group (YIAG), London Court of International Arbitration; Nigerian Bar Association; Association of Professional Negotiators and Mediators; and Mediation & Conflict Management Group. He is also an Associate Member of the International Centre for Dispute Resolution (ICDR).

Umar Farooq is currently an Assistant Professor with Rizvi Institute of Management Studies and Research, Mumbai, India, where he teaches subjects in the domain of Finance. He is also associated as a trainer with Institute of Chartered Accountants of India. In the past, he has worked with Centre for Monitoring Indian Economy as an Industry Analyst. He also undertook consulting assignments with Deutsches Asienforschungszentrum (DAfz) and Dun & Bradstreet (D&B) India. At DAfz, he developed an economic model for Malaysian Palm Oil Council (MPOC) to help them understand the potential economic losses it will suffer due to adverse Transnational NGO campaigns. At D&B, he prepared sectoral reports to apprise its clientele of the prevalent economic risks in various industries of the Indian economy. Umar Farooq holds a Master’s in Management Studies from the University of Mumbai, specialising in Finance. He is pursuing his Doctoral Studies from the Jamnalal Bajaj Institute of Management Studies, Mumbai. He also received full scholarship from University of Luxembourg for a Certificate Course in Law and Regulation of Inclusive Finance. Umar Farooq has published and presented research papers in conferences and has reviewed books.

Umar Munshi is the founder of Malaysia-based Ethis Ventures, an Islamic Fintech Venture Builder. Its flagship platform, GlobalSadaqah.com, an Islamic Social
Finance crowdfunding marketplace was launched in early 2018. Munshi is also the Managing Director of Singapore-based EthisCrowd.com, an award-winning pioneer Real Estate Islamic Crowdfunding platform. EthisCrowd.com brings together retail crowd-investors, larger private investors and Islamic Banks to fund social housing developments in Indonesia, supported by the National Housing Programme. Ethis is also currently processing licenses and setting up in Indonesia, Dubai and Brunei. Umar is an Islamica500 Islamic Economy influencer and the founding Chairman of the IslamicFintechAlliance.com.

**Volker Nienhaus** is consultant to the Islamic Financial Services Board (IFSB), Malaysia. He was Professor of Economics at the German universities of Trier (1989–1990) and Bochum (1990–2004) and President of the University of Marburg (2004–2010, retired). He holds an honorary professorship of the University of Bochum and was Visiting Professor at the University of Reading (UK), University of Malaya, and Qatar Faculty of Islamic Studies. He was a member of the Governing Council and Adjunct Professor of the International Centre for Education in Islamic Finance (INCEIF). He served in several academic advisory committees and boards, including the German Federal Ministry of Economic Co-operation and Development, the German Federal Agency for Civic Education and the World Islamic Economic Forum (WIEF). His interest in Islamic economics and finance and his list of publications date back to the late 1970s.

**Ziyaad Mahomed** is a faculty member at INCEIF and Shariah Board Chairman at HSBC Amanah Malaysia. Dr. Ziyaad is a multi-award-winning scholar with almost 20 years of global experience as an executive, consultant and Islamic Scholar in Islamic finance and capital markets. He serves on a number of Shari‘ah boards internationally.
PART I

Introduction
Just as we were completing the editing of this book, Malaysia introduced a new subsidiary legislation to regulate cryptocurrencies in the country. The news hit global headlines, particularly among the tech communities. The law, Capital Markets and Services (Prescriptions of Securities) (Digital Currency and Digital Token) Order 2019, which regulates all initial coin offerings (ICOs) and cryptocurrencies, came into force on 15 January 2019. It classifies cryptocurrencies and digital tokens or digital assets as securities. Without doubt, cryptocurrencies seem to be the most visible albeit controversial example of fintech. This further justifies the need to clarify the legal, regulatory and Sharī‘ah issues pertaining to such fintech applications.

Fintech is changing our lives for the better through unending technological applications in the finance industry. The daily lives of human beings, and even non-humans, are now tied to technological applications where robots have taken over the roles of financial advisors. While regulators and lawmakers try to catch up with the rapid developments in financial technology, it appears the rapid rate of development in the fintech sector is outpacing regulatory frameworks. This uncertain situation is more complicated in a niche industry such as the Islamic financial services industry, which has additional faith-based filters in its product-development process. This therefore makes a case for the need for thought leadership in relation to this uniquely important subject in order to guide policymakers, regulators, and practitioners on the dynamics of fintech in Islamic finance, and provide a good understanding of the Sharī‘ah and legal and regulatory parameters for fintech solutions.

A quick search of the available books on fintech reveals that one of the earliest publications on this subject was published in 2016. With the exception of a few books on fintech published in earlier years, most leading books on fintech were published in 2016 due to the novelty of the phenomenon. It thus appears the academic response to practical applications in the financial technology industry is not as fast as the emergence of innovative fintech applications in different sectors...
of the financial industry. This makes a case for the need for deeper studies beyond the discourse of the disruption of the banking sector which has dominated the whole idea of fintech in the past few years.

Fintech should be understood to cover all aspects of the application of technological advancement in delivering, facilitating, or enabling financial services. Therefore, fintech includes blockchain applications and other web-based services utilised in the financial services industry as well as offline-to-online (O2O) and Internet-of-things (IoT) applications. One could simply say the list is endless and such should be the general understanding of fintech rather than confining it to the most prevalent applications such as blockchain technology and cryptocurrencies.

Being a pioneering book in the field of fintech in Islamic finance, this book offers fresh and alternative ideas of fintech applications while addressing some socio-economic, legal and Shari‘ah issues associated with such applications within the general purview of the Islamic financial services industry. While there has been too much emphasis on crowdfunding, cryptocurrencies and blockchain technology in the general discourse on fintech, this book provides additional areas of application within the transaction spectrum of Islamic financial contracts such as legal documentation, e-commerce and dispute resolution which is at the tail-end of the whole transaction process. For this, the book addresses online dispute resolution (ODR) and its relevance to Islamic financial transactions with specific reference to how such a mechanism could be applied under the existing legal and regulatory framework in Malaysia (Oseni and Omoola 2015).

Just like the conventional fintech landscape, the list of fintech applications or solutions in Islamic finance is endless. In fact, besides areas such as anti-money laundering and anti-terrorism financing and customer due diligence, fintech could also be applied to aspects of Shari‘ah verification of transactions and robo-Shari‘ah advisors. These unique aspects, which might not be necessary in the conventional application of fintech, necessitate the need to specifically address fintech from the Islamic finance perspective. This huge vacuum is what this book seeks to fill in its length and breadth.

Fintech in Islamic finance should be generally understood in a broad manner as Islamic financial services transcend mere banking. The Islamic financial services spectrum comprises of Islamic banking, Islamic insurance or *takāful*, Islamic capital market and Islamic money market. From the transactional perspective, the understanding of fintech in Islamic finance includes all aspects of a typical Islamic financial services transaction starting from the negotiation phase, credit scoring/checking phase, documentation phase, execution phase and up to the post-transaction issues such as managing defaults, addressing disputes and enforcement of contractual terms, judgements of the courts/arbitral tribunals or settlement agreements.

**Current trends in fintech application**

In an Ernst & Young Report titled *Banking in Emerging Markets: GCC Fintech Play 2017*, it was revealed that the private sector investment in fintech increased from
less than US$3 billion in 2012 to US$19 billion in 2015. This promising and disruptive technological innovation in the financial services sector is being considered as the future of the global financial system. Though the fintech aggressive revolution is said to enhance consumer value proposition in the financial services sector, one would also like to consider whether there is an additional proposition in infusing Sharī‘ah-compliant principles in the disruptive innovations to further enhance the consumer experience of a segment of the financial consumers who are biased towards Sharī‘ah-compliant financial services.

For the purpose of identifying the applicable Sharī‘ah principles, it may be helpful to define fintech in its general sense and identify its different components and applications. Therefore, adopting the Wharton Fintech Club definition, fintech may simply be referred to as “an economic industry composed of companies that use technology to make financial systems more efficient” (McAuley 2014). The Sharī‘ah principles will only apply to each of the components or applications after a careful study of the specific details rather than the generic term “Fintech”. This is why this book does not use the term “Islamic Fintech”, which is becoming popular among Muslim finance professionals. Although, from the branding perspective, “Islamic Fintech” appears to be more appropriate to demonstrate the uniqueness of fintech solutions in Islamic finance, it is preferable to use the terms “Sharī‘ah-compliant Fintech” or simply, “Fintech solutions in Islamic finance”. Giving fintech the “Islamic” label presupposes that it is truly Islamic – a feature which can only be determined upon obtaining a formal Sharī‘ah approval. After all, fintech is merely a means to an end and not the end itself; hence, it should not necessarily carry the full “Islamic” label.

Moreover, there is some sort of confusion in identifying what is and what is not of fintech. While there has been much emphasis on blockchain technology, there are other less complicated applications that may also fall under the general purview of fintech. This is probably why it is difficult to address all operational issues affecting fintech applications. The same thing is true for applicable Sharī‘ah principles. It might be difficult to address all Sharī‘ah issues relating to fintech, as this remains an evolving phenomenon whose components and features have not been exhaustively discussed. However, it is important to agree on what fintech entails through the identification of what it applies to. In this context, one could say fintech includes any technological application to financial services transactions from the negotiation stage through the documentation, execution and closing stages of the transaction, including matters connected to how disputes emanating from such transactions are resolved.

**Understanding this book**

With the complex fintech ecosystem, which according to a Fintech Report by PwC, has the following key players – financial institutions, tech companies, infrastructure players, start-ups, regulators and government, consumers and users, investors/incubators/accelerators – this emerging field requires close
scrutiny, regulation and consideration of applicable legal and Shari’ah principles. Emerging technologies and tools have undoubtedly disrupted the traditional financial tools, and, as such, Shari’ah scholars ought to be far ahead of such developments. Therefore, in order to address these issues, this book is divided into six distinct but related parts. After this Part I, the next part, Part II focuses on fintech and financial intermediation, while considering the unique opportunity fintech creates for Islamic finance development. Part III sets the Shari’ah parameters for fintech, which serves as a valuable guide to innovators and regulators alike. It also clarifies the position of Islamic law on cryptocurrencies such as bitcoin. Part IV examines the legal and regulatory issues in fintech, including the potentials of smart contract in Islamic finance.

Having set the Shari’ah and the legal and regulatory framework for fintech solutions in Islamic finance in the previous parts, Part V provides useful case studies on fintech applications in Islamic finance. It also provides potential use cases of fintech applications, which could be taken to the next level. Such significant discussion on case studies, which transforms concepts to real-time applications, will be useful for technopreneurs. Finally, Part VI provides some future directions and impact of fintech in Islamic finance.

Fintech and financial intermediation

Though some studies have raised some concerns on how fintech might potentially exclude a larger segment of the society from financial services, one may conversely argue that with the proliferation and penetration of mobile and internet connectivity across remote societies in developing countries, fintech will better enhance financial inclusion. However, what does fintech have to offer to a vulnerable segment of society which prefers Shari’ah-compliant financial services, and is thus self-excluded due to the non-availability of financial services that are in consonance with its religious ideals? This is where the discussion on fintech and its potentials for furthering the goal of Islamic social finance is germane.

It appears the original DNA of fintech, which relies on a group of participants and in some cases big data, is similar to the communal principles in Islam otherwise known as ummah, where social solidarity is paramount. The ability to mobilise funds for a common or communal cause through crowdfunding, which in some cases is more of donation or interest-free loans, presents a new mode of financing that mirrors the traditional Islamic principles of social finance. Therefore, one may ask whether fintech is a natural form of Islamic finance. A further question that may be addressed is whether the emergence of fintech and the increasing adoption of fintech solutions in Islamic financial services presents a unique chance to re-orientate Islamic finance and streamline its value proposition towards social finance.

From the social finance perspective, can fintech promote financial inclusion in Muslim majority countries? While some have argued that fintech will
further deepen the surge of financial exclusion, the rate of internet penetration and adoption of mobile technologies in most rural areas in Muslim countries presents a different scenario. Hence, it is believed fintech has the potential of promoting financial inclusion and has some inherent developmental objectives which will help promote the 17 Sustainable Development Goals (SDG) of the United Nations in Muslim-majority countries. It is pertinent to note that fintech in Islamic finance will not only be relevant in ending poverty and hunger, it will also help to improve health and education, make cities more sustainable, combat climate change, and protect oceans and forests. This social dimension to fintech in Islamic finance is important to emphasise the need to come up with Shari’ah-compliant solutions which can be funded through Shari’ah financing to promote sustainable development (Ansari et al. 2012; Bennett 2015). There are increasing interests in green financing which has seen the issuance of Green Sukuk in Malaysia based on the Malaysian SRI Sukuk Guidelines (Moghul and Safar-Aly 2014). Undoubtedly, Islamic finance has more areas of convergence with the socially responsible investment (SRI) movements than any other financing model (Oseni 2014), and automating such processes through fintech will help to emphasise and promote the social element in Islamic finance as it relates to the higher objectives of Islamic law (maqāsid al-Shari’ah).

**Setting the Shari’ah parameters**

What is unique about fintech in Islamic finance? Is fintech in Islamic finance different from the conventional fintech? What are the parameters for any new technological disruption in Islamic finance? As earlier highlighted, fintech goes beyond just cryptocurrencies, as it covers a wide spectrum of application of innovate technology in financial services. So, rather than confining the discussion to cryptocurrencies, other beneficial applications such as online crowdfunding platforms, e-commerce, smart contracts, blockchain technology and online dispute-resolution platforms for Islamic finance disputes may be less controversial. With emphasis on blockchain technology and the significance of smart contracts, Islamic banks may leverage on this for Islamic finance agreements that have the ability to self-execute, self-maintain, and self-enforce, thereby reducing uncertainties in dispute-resolution processes through litigation (Oseni and Omooola 2015; Koulu 2016; Watanabe et al. 2016a, 2016b).

The fintech universe is complex. As such, fintech applications may be grouped according to the financial market activities where they are applied. For payment, clearing and settlement, one may have the following applications: mobile, web and contactless payments, digital currencies and distributed ledger technologies. For deposits, lending and capital raising, one could have the following applications: peer-to-peer lending, marketplace lending and crowdfunding. Another category is market provisioning, which includes e-aggregators, smart contracts, Big Data and digital identity. Finally, for the investment management category, the following applications are prevalent: robo-advisor and electronic trading. All
these applications are regulated under the RegTech framework (Adams 2016: 3). These are just examples of prominent fintech innovations, which is a non-exhaustive classification. The implication of this is that Shari’ah scholars may need to come up with applicable principles on each innovation.

One key aspect of fintech which is conspicuously missing in the ongoing discussions and application of fintech in Islamic financial services and products is online dispute resolution (ODR). There has been an attempt to explore the relevance of ODR in Islamic banking generally and the prospects of such technological innovation in reducing the number of Islamic finance disputes going to the courts. In the model, which has been conceptually analysed and empirically tested, Shari’ah compliance of the settlement decision is emphasised to ensure the process and outcome are both driven by the same principles underpinning Islamic financial transactions (Oseni et al. 2018; Oseni and Omoola 2017).

When it comes to fintech solutions in Islamic finance, Shari’ah compliance is paramount and this should be based on the same principles applicable to commercial transactions with particular reference to the prohibited elements in commercial contracts and operations for financial services. The same general principles can be applied to specific instances. This will, however, require legal adaptation (takyif fiqhi) to address the peculiarities of fintech, as there are no precedents to these disruptive innovations (Shubayr 2004). This has been proposed recently by the Dubai Financial Services Authority (DFSA) which seeks to subject Shari’ah-compliant equity crowdfunding platforms to the original rules applicable to Islamic financial institutions.

A former Secretary General of the Islamic Financial Services Board (IFSB), Jaseem Ahmed (2017) summarised the importance of considering Shari’ah and regulatory issues while embracing the solutions fintech has to offer to the Islamic financial services industry:

> From the Shari’ah perspective, there are two complementary principles at stake: first the principle that in fiqh al-mu’amat innovations are allowed unless they fall under an explicit prohibition, and second, the rather detailed requirements of Islamic law for the validity of exchange contracts. Contractual uncertainty may pose a challenge in many Fintech cases.

> At the same time, subject to conformity with Shari’ah principles, solutions from other FinTech areas such as blockchain and smart contracts may help to improve operational efficiency in Islamic finance. … The Shari’ah compliance challenge is in identifying the perimeter of permissible innovation, when the formal requirements of classical contracts are not met, whilst elucidating the modifications that would permit access to the new technology on a Shari’ah-compliant basis.

These concerns in setting the Shari’ah perimeters of permissible innovations and applications are addressed in a systematic manner in this book by leading Shari’ah scholars.
One may ask how to apply Islamic *fiqhi* (jurisprudential) tools such as *hiyal* (legalistic trickery) and *markharij* (legal solutions in compliance with the spirit of Islam), *maslahah* (public interest), and *dhara'i* (blocking the means to evil) to new fintech-driven products, solutions, services and contracts. The question is whether we should wait for issues to emerge and mature or imagine and be prepared with a more suitable response. Issues have already emerged. There are some existing Shari’ah opinions, which some may consider “cursory” at this stage because the premise of such opinions is not generically based on in-depth scholarly research. While some scholars have declared, for example, cryptocurrencies such as bitcoin as impermissible, others have considered such innovations permissible. In fact, some proponents of some of the applications of fintech have resorted to fatwa shopping to get favourable rulings to support their online trading of bitcoin (Oseni et al. 2016). So, this is the time Shari’ah scholars should come up with informed scholarly opinions on specific issues. With particular reference to cryptocurrencies and the seeming revival of Islamic dinar and dirham, Shari’ah scholars may come up with informed opinions to prevent abuse of the common naivety in most Muslim communities where there is always the tendency of manipulating people’s beliefs for marketing purposes. Over the past few decades, one has seen the different dimensions of faith or *taqwa* premium in marketing Shari’ah-compliant products and services in many jurisdictions, particularly in western societies (Khan 2014).

There is what is called “Islamic Cryptocurrency E-Dinar Coin” online and Muslims are being encouraged to join the bandwagon. In this specific case study, there is an interest rate of up to 0.65 per cent to be paid daily. These are areas leading Shari’ah scholars may scrutinise to guide the unsuspecting and naive Muslim investors. Such practices therefore make a good case for an authoritative text that will guide policymakers, unsuspecting investors, students, as well as regulators on key Shari’ah and legal parameters in the application of fintech solutions in the Islamic financial services industry.

From the Shari’ah perspective, *maqāṣid al-shari’ah* will continue to be relevant in fintech, as the *maslahah* provided by the new technologies trumps any other argument that seeks to preserve the traditional financing methods. Therefore, when there is a conflict between public interest and private interest, the former will prevail as established by the early Muslim jurists (Kamali 2009). This makes a case for the adoption of fintech in Islamic commercial dealings.

In addition, how do we consider the *maslahah* in robo-advisors for portfolio management? More importantly, what is the value of Shari’ah robo-advisors or robo-advisors for Shari’ah-compliant products? (Andrus 2014; Hougan 2015). This might pose significant legal, operational, reputational, and Shari’ah risks to Islamic financial transactions. Can investors trust robots to render better investment advice in Shari’ah-compliant transactions? Can we replace Shari’ah officers in financial institutions with robots? This would have some implications for consumer protection laws and agencies. Therefore, a *maslahah* determination of fintech should consider the imperativeness of legal and regulatory framework to
avoid market abuse which is currently being experienced in some cryptocurrency applications. Important points to consider here include the following:

(i) For cryptocurrencies, who determines the legal tender in a particular jurisdiction? Legal tender should ordinarily be determined by a constituted authority in a particular jurisdiction. Public interest overrides individual interest in this case (Hasan 1971). Therefore, all forms of cryptocurrencies should be regulated in each jurisdiction to avoid abuse, fraud and financial misconduct which may lead to money laundering and terrorism financing.

(ii) *Sadd al-Dhari’ah*, or blocking the means to evil, may be invoked to avoid associated harm in some of the fintech applications, particularly cryptocurrencies.

(iii) Necessary safeguards should be put in place to avoid operational failures where the data of investors are compromised.

(iv) There is a need to consider the effect of hacking of the blockchain technology applications and the effect of such on the funds invested by the people. Sharī‘ah and legal scholars may introduce a strict liability regime to protect the investments.

**Legal and regulatory framework for fintech**

Leaving fintech without regulation or robust legal framework will render the whole disruptive innovation susceptible to abuse, misuse and devastating manipulations. Therefore, regulatory technology or RegTech may have to step up its proactive regulations to regulate fintech applications. Beyond RegTech, there is a need for regulatory guidance for the application of fintech in financial services as recently experienced in Malaysia with the enactment of the Capital Markets and Services (Prescriptions of Securities) (Digital Currency and Digital Token) Order 2019.

On 31 March 2016, the Office of the Comptroller of the Currency (OCC) of the United States released a White Paper that outlines its support for responsible innovation in the country’s federal banking system. The OCC defines “responsible innovation” as:

> The use of new or improved financial products, services, and processes to meet the evolving needs of consumers, businesses, and communities in a manner that is consistent with sound risk management and is aligned with the bank’s overall business strategy.

*(Curry 2016)*

This recognises and acknowledges the OCC’s receptivity to innovative solutions such as fintech as long as they uphold sound risk management and corporate governance principles, and comply with relevant laws and regulations, and protect consumer rights.
In evaluating the innovative products and services offered and/or performed by banks, the OCC formulated eight principles which mirror its perspective of fintech solutions. Therefore, the OCC would:

Support responsible innovation, Foster an internal culture receptive to responsible innovation, Leverage agency experience and expertise, Encourage responsible innovation that provides fair access to financial services and fair treatment of consumers, Further safe and sound operations through effective risk management, Encourage banks of all sizes to integrate responsible innovation into their strategic planning, Promote ongoing dialogue through formal outreach, and Collaborate with other regulators.

(Curry 2016)

These principles are quite important in a global financial industry that experienced economic meltdown barely a decade ago and the ability of fintech innovations to effectively navigate strict financial laws and regulations in different jurisdictions. While it is important to create room and accommodate start-ups through fintech, consumer protection laws must be strengthened, and relevant laws and policies must be put in place to avoid an unprecedented devastating financial crisis.

From the Shari’ah perspective, financial issues that have significant impact on people’s lives and the overall economy cannot be left entirely in the hands of individuals. The state may step in to regulate an industry to ensure financial stability and consumer protection, particularly when unsuspecting investors may be the subject of financial abuse. The Islamic concept of *hibsah* which saw the introduction of the office of *muhtasib* (or ombudsman) in the early days of Islam is a testimony to this assertion (Rashid 2004). The *muhtasib* regulated the market and ensured financiers as well as vendors complied with the rules to avoid any business misconduct that would negatively impact the public (Abdul Hak et al. 2013). Such practice may be replicated in the modern application of fintech innovations in the Islamic financial services industry. For instance, as discussed earlier, individuals may not be legally empowered to determine the medium of exchange through cryptocurrencies. The constituted authority in the state may need to set the minimum regulatory standards as being experienced in some jurisdictions such as Singapore, the United States, and more recently, Malaysia.

**Current and potential applications of fintech in Islamic finance**

While the specific scope of fintech cannot be identified generally, as new innovative solutions for financial services keep springing up, one thing that remains constant in the analysis is that fintech has the potential to apply to financial services regardless of the nature and type of such services. For Islamic finance,
the application of fintech covers the conventional scope as well as certain unique aspects such as Shari‘ah advisory, ethical screening, and structuring of partnership products that are uniquely Shari‘ah compliant. As earlier observed, the application of blockchain technology and the internet platform or in general terms, the information and communications technology (ICT) revolution in Islamic financial services covers the whole spectrum from the negotiation phase up to post-execution matters such as dispute resolution, including litigation and arbitration, enforcement of awards and/or judgements of the court, defaults, debt restructuring, etc.

The most innovative and disruptive application of fintech in the Islamic financial services industry, which is gradually gaining momentum and generating series of Shari‘ah debates and regulatory unclarity, is cryptocurrencies. As discussed earlier, despite the emergence of cryptocurrencies such as E-Dinar Coins, there are still unresolved Shari‘ah and regulatory issues that require in-depth research as highlighted earlier and as discussed in the relevant sections of this book. Setting the Shari‘ah parameters for these kinds of disruptive innovations goes beyond mere halal (permissibility) and haram (prohibition) from the strict Shari‘ah perspective. There are other aspects such as Shari‘ah public policy considerations, regulatory aspects, and the associated abuse and misuse of such innovations in an increasingly interconnected world.

For the current applications of fintech in the Islamic capital market, there has been a significant increase in the adoption of technology and innovative solutions in leading jurisdictions offering Islamic financial services. For instance, in Malaysia, the Investment Account Platform (IAP) was introduced as a cross-border multi-currency platform for facilitating regional and global financing opportunities for emerging business ventures. The IAP is based on a consortium of several Islamic banks who help as financial intermediaries to channel the funds to deserving business ventures.

Similarly, there have been other innovative solutions in Malaysia for liquidity management such as the Bursa Suq Al-Sila (BSAS) online platform for managing commodity murābahah transactions (Saiti et al. 2016). The platform provides a Shari‘ah-compliant trading mechanism for facilitating tawarruq (monetisation) and murābahah transactions online which is a seamless and fast process of concluding the applicable strings of transactions. This pioneering end-to-end Shari‘ah commodity trading platform was introduced as far back as 2009 and has since won global attention with the increasing use of the platform across borders. There is an increasing acceptance of the platform from participants across borders from different jurisdictions, particularly in the Middle East and North African and Asian regions. This has led to an annualised growth of 178 per cent in the use of the online platform for murābahah and related transactions between 2009 and 2014 (MIFC 2016).

In the United Arab Emirates, the Dubai Multi Commodities Centre (DMCC)’s Commodity Murabahah Trading Platform (CMTP) became fully functional in 2013. The CMTP adopts the tradable warrants model by enabling
transfer of ownership and possession through the online platform. Similar to the BSAS, the CMTP is a fully electronic platform for commodity murābahah transactions and it is Shari‘ah compliant. While addressing all possible Shari‘ah concerns, the platform provides the means to ascertain the existence of the underlying commodities and inspection by relevant parties to the transaction prior to final execution of documentation and conclusion of trade, verification of the underlying warrants to ensure that they are legally recognised documents, and a retrievable document trail with standard audit capabilities for both conventional and Shari‘ah audit functions (Nazir 2013). A similar innovative solution for Islamic financing through wakālah (agency) investments as underlying assets is the Nasdaq Dubai Murabahah Platform. The online platform provides a seamless, easy, and fast solution for Islamic banks who offer financing to customers.

Beside this application of fintech in Islamic capital market, there is increasing use of crowdfunding platforms for financing of Shari‘ah-complaint projects, particularly for small and medium-sized enterprises (SME), housing, and agricultural financing. A few of such case studies are provided in this book while other potential use cases are also discussed. Some of the innovative solutions discussed in this book include EthisCrowd, the IAP, Blockdentity, and WaqfCoin. This practical and professional dimension in the discussion of fintech in Islamic finance makes this book not only relevant for academics but also makes it an important handbook for practitioners who wish to expand and extend the frontiers of fintech applications or replicate the existing solutions in different jurisdictions.

Furthermore, fintech has engineered rapid developments in the mobile-payments space across the world. In fact, in some developing countries like Kenya, mobile payments have enhanced financial inclusion as more rural people have access to financial services. While this promising financial technology solution has been widely adopted in different forms, there is a need to examine specific legal and Shari‘ah issues in its application with a view to guide consumers who are religiously inclined to Shari‘ah compliance.

**Conclusion: Future impacts of fintech in Islamic finance**

While fintech applications in the banking and capital market sectors have been widely acknowledged, there has not been much focus on what we may refer to as Taktech or takāful technology. This is a Shari‘ah-compliant variant of the conventional insurtech. Taktech, being a subset of fintech in Islamic finance that combines the word “takāful” and technology, seeks to revolutionise the takāful sector by complementing existing initiatives to extend takāful to the underinsured segments of the population. Taktech is the latest buzzword that specifically refers to the application of technology in different aspects of Shari‘ah-compliant insurance schemes or takāful to complement existing practices, enhance financial inclusion, serve the underinsured, and promote best practices in service delivery to policy holders or participants.
Finally, it appears there has been too much emphasis on the technological part rather than to the financial component of fintech. This is why most frameworks have not really seen the relevance of Shari’ah and its hermeneutic principles in fintech applications. While it might not be necessary to come up with terms such as “Islamic Fintech”, the deployment of fintech applications for Islamic financial services and products should not only be properly regulated under the laws of different jurisdictions but emphasis should also be placed on Shari’ah governance. Regardless of the numerous advantages inherent in fintech applications, its significant regulatory challenges remain a major concern in the global Islamic financial services industry.

Chapter 18

1 General Data Protection Regulation (GDPR) is a regulation in European Union law
   on data protection and privacy for all individuals within the EU and the European
Economic Area (EEA). It was made on 14 April 2016 and implemented with effect from May 25 2018.

2 Quran 2 verses 275 and 276 are two key verses establishing them as core principles.

3 Know Your Customer (alternatively, Know Your Client or “KYC”) is the process of a business verifying the identity of its clients and assessing potential risks of illegal intentions for the business relationship. The term is also used to refer to the bank regulations and anti-money laundering regulations which govern these activities (De Smet and Mention 2011). Know Your Customer (KYC) is governed by numerous regulatory provisions across various financial jurisdictions.

4 In the words of Malaysia’s Communications and Multimedia Minister Gobind Singh Deo: “We feel if we can formulate a digital ID, it would make it easier to market goods on e-commerce platforms and expand the industry further.”

5 CP – Claiming Party in an identification process.

6 RP – Relying Party in an identification process.

7 Identity claims consist of the user’s attributes (for example, name, date of birth, nationality, occupation and so on), which are stored in text and object fields (JSON-LD blobs). For convenience and efficiency, the platform is equipped with an optical character-recognition feature that will automatically parse the information from photos or scans of documents.

8 First, all US states were authorised to accept some form of e-notarisation in conformance with the Uniform Electronic Transactions Act (UETA) which was approved in 1999 by its National Conference of Commissioners on Uniform State Law (NCCUSL) as an overlay statute to help reconcile conflicting state laws. Second, the Electronic Signatures in Global and National Commerce (ESIGN) Act was passed in 2000 by the federal government and grants legal recognition to electronic signatures and records if all parties to a contract choose to use electronic documents and to sign them electronically, and it also supports e-notarisation.

Chapter 19

1 BNM is the Central Bank of Malaysia. It was established under Central Bank of Malaysia Act 2009 (CBA), which came into force on 25 November 2009. The Act repealed the Central Bank of Malaysia Act 1958. The main function of BNM is to provide greater clarity to the Bank’s mandates on promoting monetary and financial stability, and to exercise oversight over payment systems.

2 The Payment System Act 2003 (PSA), now repealed, provided for an oversight regime for compulsory corporate governance for both operators and issuers of designated payment instruments, which include e-money, credit card and charge card. A critical examination of the PSA’s provision shows that the legislation does not provide for any form of dispute resolution framework but is intended to complement the operational arrangement of payment service system providers. With the coming into force of IFSA 2013 (regulates the Islamic financial services industry) and FSA 2013 (regulates the conventional financial services industry), all the relevant provisions regulating payment systems in the PSA have been incorporated into the new laws.

3 Sukuk commonly refers to the Islamic equivalent of bonds. As opposed to conventional bonds, which merely confer ownership of a debt, Sukuk grants the investor partial ownership or share of an asset, along with the commensurate cash flows and risk.

4 Malaysian Electronic Payment System (MEPS) is a payment consortium owned by the domestic financial institutions, including those offering Sharī‘ah-compliant products, to promote the sharing of banking infrastructure. One special feature of MEPS is the Shared ATM Network (SAN) switch, which enables participating banks’ customers to access their account through over 20 participating domestic financial institutions and international partners mainly in Southeast Asia.
Section 138 IFSA 2013 provides for the Financial Ombudsman Scheme, which is an apparent enabling provision for any dispute resolution initiative, including the ODR mechanism for Islamic finance disputes. The clear provisions of section 138 are reproduced verbatim here:

(1) For the purposes of ensuring effective and fair handling of complaints and for the resolution of disputes in connection with financial services or products, regulations may be made under section 271 to require any class, category or description of financial service providers
(a) to be a member of a financial ombudsman scheme approved under subsection (2); and
(b) at all times, to comply with terms of membership of such scheme.

(2) The Bank may approve any financial ombudsman scheme for the purposes of paragraph (1) (a).

(3) Regulations may be made under section 271 for the purposes of ensuring that a financial ombudsman scheme is fair, accessible and effective, including regulations on the following:
(a) the matters that the Bank may have regard to in determining whether to approve a financial ombudsman scheme under subsection (2);
(b) the functions and duties of, or other requirements to be complied with by any person operating a financial ombudsman scheme;
(c) the terms of a financial ombudsman scheme setting out the scope, including types of dispute that may be referred to it and its eligible complainants, membership requirements, application, operations, procedures, the fees that may be charged and the types of award which may be granted under the financial ombudsman scheme;
(d) appointment of directors of any person operating a financial ombudsman scheme;
(e) the documents or information that shall be submitted by any person operating a financial ombudsman scheme to the Bank; and
(f) withdrawal or suspension of an approval under subsection (2).

(4) A financial service provider, who is a member of a financial ombudsman scheme, approved under subsection (2), shall–
(a) provide documents or information as may be required for the purposes of the resolution of disputes referred to the financial ombudsman scheme; and
(b) comply with any award granted under the financial ombudsman scheme, including a direction that requires the financial service provider to take such steps in relation to a dispute.

Where a dispute has been referred to a financial ombudsman scheme by an eligible complainant the eligible complainant is not entitled to lodge a claim on such dispute with the Tribunal for Consumer Claims established under the Consumer Protection Act 1999 [Act 599].

Since 1997, laws have been passed in Malaysia to enable the deployment of innovative technology in the running of different apparatus government and the economy. These laws are two-fold: first are legislations which have focused on legal recognition, security and privacy of online commercial transaction and communications. The most recent among such legislations are:

Digital Signature Act, 1997
Computer Crimes Act, 1997 Copyright (Amendment) Act, 1997 (also read Copyright Act, 1987) Telemedicine Act, 1997
Communications and Multimedia Act, 1998
Communications and Multimedia Commission Act, 1998
Personal Data Protection Act, 2010
While the E-Commerce Act 2006 did not provide for any dispute resolution mechanism, the Sale of Goods Act 1957 and the Contracts Act 1950 is deemed to be the prescribed law for seeking judicial remedy in the event of e-disputes under this Act.

7 Rehn writes:

I would like to remind you that the Ombudsman is an intellectual gift from Turkey to modern democracies. Swedish King Charles the Twelfth admired the functioning of this Ottoman institution during his time travelling in Turkey in the early eighteenth century. He established the office of His Majesty’s Supreme Ombudsman in Sweden by signing an ordinance in Timurtas, just south of Edirne, in 1713. Now it is time to re-import this excellent institution back to Turkey, after it has undergone several centuries of product development in various other European countries.
